Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
<p>Concern No. 54750</p> <p>Concern Info Lafayette County Planning called regarding a concern about open burning at a property, as well as junk present and oil leaking onto the ground. They had done a drive-by and saw a smoldering burn pile with evidence of trash and other debris on it. If you look at the 2023 aerial on the Lafayette County Assessor's GIS page, you can see a large pile in the middle of the property which is the burn pile. The report they had received said the responsible party may be burning tires as well. There are tires and junk cars throughout the property. There is also junk on the border between this property and the property to the west, overflowing the property boundary and running together. Additional report information is in linked folder.</p> <p>Comments The County Planning and Code Enforcement sent the property owner a letter of violation dated September 15, 2023, and will work with them on compliance.</p>

--------	--------------------	---------------	---------------------------------	-------------	-----------------	--------------------	-----	------

Concern No. 55063

Concern Info My name is Elizabeth Deich. My family farm adjoins ZMDR's property. On September 5th I was sitting on my couch when I noticed some headlights that I thought were in my field. So my husband and I went outside and were hit with a very offensive odor. Upon further inspection it was a tractor in the adjoining field. When my husband drove out in our pasture to see exactly what they were doing, they shut off their lights. Even some of the barn lights.

We witnessed the same thing on September 12th and 13th. Every time we try to get close enough to video document we can no longer see the tractor. During the day it seems like they are spreading manure. It's more of a manure smell but at night and early morning it smells like rotting carcass. I'm not exactly sure what their guidelines are but I just know that whatever they are doing at night smells disgusting. (9:25 pm is when the events have been witnessed) Are they legally able to apply entrials? I'm not sure that's what they are doing but that's what it smells like.

Comments A site visit was conducted, this facility is in Compliance and Enforcement, compliance is being determined

KCRO	9/18/2023	9/15/2023	Groh Road Properties LLC	Cleveland Cass	Fugitive Particulate Matter	CK
------	-----------	-----------	--------------------------	-------------------	-----------------------------	----

Concern No. 54885

Concern Info CP states that Suburban Lawn and Garden owns 1000+ acres in the area and they are stripping the top soil off of the property. The top soil is then taken to the city to sale at its retail locations. He said there are anywhere from 20-30 trucks that travel the gravel road and they have dust flying all round the area. Additionally, they have no erosion fences and silt is running down the road.

Comments

At the time of the site visit, I was unable to confirm any fugitive dust violations. A representative of the site was informed that dust created on their property could not be allowed to leave their property.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
KCRO	9/18/2023	9/15/2023	City of Urich	Urich Henry	Bypass or Sewer Overflow Open Burning	JS		

Concern No. 54889

Concern Info Anonymous CP states that for years the city has been piling trash, tires and other debris and burning it (CP states that DNR has 'ticketed' the city before on the burning issue). The burn pile is located across from the city park near 4th and 3rd Street. Last burning occurred about a month ago and they are starting to pile it up again so it is only a matter of time before the city will begin burning the pile again. Also, just down the hillside from the burnpile there is a sewer manhole that every time there is a rain it overflows and runs everywhere. CP also stated that there was a statement about the city previously 'pumping from the lagoon straight into the river' before (date uncertain). From 7 Hwy take Main St South to the city hall-then turn left on 3rd St-this will dead end to the area of the burn pile/city park. Just down the hill from the burn pile is the sewer drain that frequently overflows.

Comments No materials other than vegetation appear to have been burned. While no burning was observed during the investigation, the City's yard waste burn pile is less than 200 yards from the nearest structure not owned by the City. A letter will be sent to the City of Urich clarifying the current open burning regulations.

Concern No. 55104

Concern Info Submitted at 11:41 am Thursday, September 21, 2023.

Are Missouri counties required to provide dust control on unpaved, public roads being used for transportation of aggregate and asphalt from quarry to jobsite?

I live very near the quarry supplying materials for the Missouri highway 13 improvement project in Ray county and see an average of 200 trucks per day transporting material from the quarry location to the jobsite. Those trucks are traveling on unpaved public roads maintained by Ray county. The dust in the air as well as dust accumulation on nearby cattle grazing ground has dramatically increased since the quarry began producing asphalt on 9/19/23.

The concerned party listed the responsible party as ConAgg - Norris Quarries - Knoxville Quarry at Maddux Road, Rayville, MO 64084.

Comments Advised concerned party that the dust from the unpaved public roads is not regulated. Referred to Ray County Commission.

KCRO	9/26/2023	9/25/2023	Trex-Mart #17	Platte City Platte	Other	MC		

Concern No. 55118

Concern Info Submitted at 5:29 pm Sunday, September 24, 2023.

Date of Incident or Date First Noticed: 09/24/2023

Your website gives the impression that you have a law that states semi trucks in Platte County cannot idle more than 5 minutes in a 60 minute interval. Is this a law or not. Deputy Sherrif Osborne of Platte County says it is not a law. Meanwhile I parked my semi here to get away from idling trucks with underbelly exhausts which pour fumes in my cab.

Comments Truck drivers idling their trucks at a truckstop parking area are typically on a government mandated rest period to meet hours of service requirements Unless a specific concern arises with evidence to the contrary, it would be impractical to inspect these drivers to verify their duty status. This specific concern appears exempt from the regulation.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 55123								
Concern Info DHSS called on behalf of Louise Bowler: She's elderly and lives near a KC waste water treatment plant. The odor is really bad and she cannot be outside too long, and the smell is inside her house. KC is building a new treatment plant near her house and is also concerned about the odor, etc. PLEASE CALL HER								
Comments Physical inspection and visit of the area did identify some odor at the plant but was judged not be significant that it would be an air violation. Also dates of operational activities with potential odor specifically sludge dredging did not correspond with dates of the odor concern August 25 - August 28th.								
KCRO	9/26/2023	9/26/2023	Unknown	Raytown Jackson	Hazardous Air Pollutant Rele	MC		
Concern No. 55124								
Concern Info Concerned neighbor is complaining about a nearby home owner has built his own furnace because he does not want to pay the gas company to heat his house. He has not seen the furnace, its in the back of the house, but it sounds like its makeshift and not safe. The whole neighborhood smells like burning plastic, very powerful odor. There is also large amount of smoke coming from the house. He does not know exactly what the home owner is burning but he has seen the home owner burn miscellaneous pieces from demolished houses. Also indicated that he has burned a different neighbor's garage door, he estimated the garage door was originally constructed in the 1950s. Concerned neighbor has stated that the home owner is potentially erratic and to be careful if approaching. Potentially under the influence of substances.								
Comments Referred to City of Raytown Community Development for possible building permit or codes issues.

Concern No. 55154

Concern Info Experienced Odor Date and Time: Sep 1, 2023 8:00 am

Experienced Odor Duration: Smells all the time!

Experienced Odor Description: Rotten Eggs, Rancid or Rotten, Sewer

Experienced Odor Intensity: Strong or Offensive

Experienced Odor Address and/or Location Description: 603 East Street Parkville Missouri 64152

Potential Source: Rotten eggs or sewer back up

Additional Information: The whole area seems to smell like rotten eggs and poo.

Comments No odor violation could be determined while I was on site. I conducting the investigation later in the afternoon and could not smell any odors. The odor problem with the sanitary sewer of Parkville is currently under construction to correct this issue.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 55157								
Concern Info Caller stated that the odor coming from the facility's painting operations. Caller stated that the painting occurs for an hour at a time and dissipates. Problem is finding the time to smell the odor. Caller stated that this is the third time calling the department of natural resources. Caller stated that they have been inside the painting operation and that the painting was occurring inside a booth with filters. Booth is located in the center of the building. The air is vented outside behind the property into the caller's parcel of land. Caller stated that the local health department has been out the most and has yet to be able to catch the odor. Caller stated that she gets sick having to deal with the odor. Caller said to call her and she would give permission to access the property for an odor reading. Updated: to include a creek that runs just behind her home.								
Comments This concern is located within the city limits of Kansas City, MO; therefore, the concern was referred to the delegated local agency, which is the City of Kansas City Health Department's Air Quality Program.								
KCRO	10/3/2023	10/3/2023	Clemstone WWTF	Platte City Platte	Odor			
Concern No. 55158								
Concern Info Caller has called before, and says there is still a continuing bad smell from the Clemstone Wastewater Treatment Facility. He said they pumped out one of the holding tanks, but there is still a bad smell, raw sewage, and therefore he believes it has to be the treatment plant part, not the holding tanks. He says it is worse in the early morning and just before dark. He says he has not seen the odor socks the plant was supposed to put out either.								
Comments Some odors were detected during the investigation, but the odors were below the regulatory threshold. No violations were observed during the investigation.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 55234								
Concern Info In the area of Highway 150 and Botts Road, work is being done where they are digging in the soil and doing some site prep. Suspect work is related to the Department of Defense facility across the street. Dust was really bad and crossing the all four lanes of 150. Work is on the south side of Highway 150 and west of Botts Road.								
Comments This concern is located within the city limits of Kansas City, MO; therefore, the concern was referred to the delegated local agency, which is the City of Kansas City Health Department's Air Quality Program.								
KCRO	10/5/2023	10/4/2023	Mike Sultany and Hunt Midwest	Kansas City Platte	Water Discoloration Odor Fugitive Particulate Matter	AW		
Concern No. 55236								
Concern Info Tracy and Gina are concerned about creek contamination.								
144th Street on the south side, quarter of a mile down. On the right, there is an entrance into a field. After the entrance is a bridge which the creek is visible. The water is all filmy, milky and gravelly. Release into the ditch on the side of the road. Hunt Midwest is the owner of the property. Lease to Mike Sultany. Plumes of dust from the quarry. The water is milky green from the gravel. The water is not visible from the road. She believes that the water does enter Todd Creek. They are willing to be contacted and show the inspectors the concerning area and want the water to be sampled before the rain washes it away. They believe Sultany might be dumping prior to rain events.								
Hunt Midwest owns both properties.								
Comments Will conduct a full inspection.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 55264								
Concern Info Ford Motor Company in Claycomo really needs to be investigated. I have blood clots in my lungs now from paint fumes and emissions in the air. When you drive by the plant the creek beside it smells like sewage. Now they received emails stating that e-coli is in their drinking water. Please clean this monstrosity up!!								
Comments Since the facility was recently found to be in compliance and this concern was too general to determine a specific source or area of the plant to investigate, a site visit was not conducted.								
I emailed the concerned party to let her know we regularly inspect this facility. The last air pollution inspection was in May 2023. The facility appeared to be in compliance with all their emission limits. We will continue to periodically inspect to verify compliance. I also sent this concern to the Missouri Department of Health and Senior Services in case there is a pattern of reported health issues in the area.								
I informed the concerned party that our Water Pollution Unit plans to survey the stream to look for any indications of Ford polluting the water. Also, our Drinking Water Unit reviewed their files and did not find any records of positive E. coli drinking water samples in the area.

Concern No. 55253

Concern Info Residents at 105 W Main St Hurdland, MO have trash littered everywhere. Earlier complaint was made to the City and a letter from the city was submitted to the rental owner that his tenants need to clean up. However City has little power due to lack of funding and no enforcement do to lack of city marshal/cop to enforce ordinances. Today they are burning mattresses, roofing singles, and house siding causing extreme toxic odor. They have a half dismantled white doge truck on the side of the road with tools, and a tub of oil drained from the engine just laying on the ground for children, pets, anything to get into. They have other junk vehicles parked in yard as well. It's an environmental hazard. They have little children running around everywhere which is a health risk.

--------	--------------------	---------------	---------------------------------	-------------	-----------------	--------------------	-----	------

Concern No. 55056

Concern Info City of Malden Acting Fire Chief John Johnson responded to an accidental railroad tie fire at approximately 12:30 PM on September 19, 2023. The RP was Freddie Acup. Freddy was apparently burning some trash when he went inside for 15-20 minutes. When Freddy returned, the fire had spread to a large pile (150-200) of railroad ties and even a shed. The Fire Department responded and applied roughly 14,000 gallons of water to the fire. When Mr. Johnson called, he was still onsite keeping watch on the fire and had created a dirt barrier around the fire to try to control it as it burned out.

On September 21, 2023, Crosley Welch conducted an investigation of a concern the Southeast regional office had received which stated approximately 150 creosote ties had been involved in an accidental fire the day prior. Upon arrival, I met with the City of Malden fire chief John Johnson. At the time, a majority of the ties had burned up, and a small amount of material was remaining. Mr. Johnson stated the fire department attempted to extinguish the fire with approximately 14,000 gallons of water with no success. Mr. Johnson stated the fire department built a berm around the fire, and monitored the fire throughout the night as it burned. During the site investigation, it appeared a majority of the ties had burned up, and a small amount of material was left smoldering. No water runoff was evident, and no waterways were in close proximity.

The property owner Mr. Kody Lamunion was on site and was actively excavating the area to ensure the remaining smoldering ties did not leave the site. He stated the incident started as a result of a nearby domestic waste burn location that had displaced material, and ignited the nearby creosote tie stockpile. Contact information was provided to Mr. Lamunion for future questions.

Lastly, Mr. Johnson stated the fire department would continue to monitor the site, and he would submit a final report to the Department. I thanked him for his time and provided contact information for future questions and concerns.

Comments An accidental fire resulted in burning approximately 150 creosote railroad ties.

Concern No. 55153

Concern Info Quarry located at the address below is emitting dust throughout the area. Recently the cloud of dust was so bad that cars could not merge on to Highway 67 due to lack of visibility. Caller also stated that the dust covers vehicles in the nearby residences when left outside.

Comments I arrived at 2339 Highway H, Farmington, MO 63640 around 11:35 a.m. on September 29, 2023. The weather conditions at the time were 83°F, with 68% humidity and a SE wind at 4 mph. I conducted surveillance at the main gate from 11:35 a.m. until 12:00 p.m. There were no dust concerns while surveillance was being conducted. I then entered the facility office where I spoke with the scale operator and I provided my credentials and a business card, the operator then phoned Tim Hampton who was on lunch at the time. We discussed the Best Management Practices contained in the facilities permit. It was evident that the water truck had been ran the day of the investigation, Tim Hampton stated the facility does the best they can to contain dust during dry periods. At the time of the investigation, there were no fugitive emission issues. I left a copy of the facilities permit with highlighted portions for Tim Hampton at the office. Tim Hampton mentioned Central Stone Co. has had to help the asphalt plant located at 37.736910, -90.437542 with watering road due to truck issues. I started surveillance of the asphalt plant at 12:20 p.m. of the same day. It was evident that the asphalt plant had ran the water truck the day of the investigation. I approach the asphalt control room around 12:45 p.m. and spoke with three operators after providing my credentials and a couple business cards. We spoke of more frequent watering of the haul road near the entrance to Hildebrecht Rd. as well as lowering the entrance and exit speeds of the trucks. I thanked the operators and left the facility. There were no fugitive emission violations noted at the asphalt plant at time of the investigation.

No violations of Missouri Air Conservation 10 Code of State Regulations Restriction of Particulate Matter to the Ambient Air Beyond the Premises of Origin were noted during this investigation.

Concern No. 55416

Concern Info From email:

There is a growing waste site for demolition materials from construction work located at 2470 County Road 5900 in Willow Springs, MO, 65793. The waste products include pipes, shingles, toilets, general debris, tires, scrap metal, old windows, and trash. The shingles are burned with other material but this has left large toxic appearing burn piles scattered throughout the 2 acres this property occupies. I have attached just three pictures but I believe they give a good idea of what is going on at this site. I have property adjacent to this and I worry about toxic run off as well as the hazards represented by the tires and other trash. The property is owned by a Redfox Unlimited LLC but I do not know who is in charge of the LLC. If you need additional information please let me know. I would like to be kept updated on the findings.

Robert Shaw

rdsakayak1@gmail.com

Comments On October 3, 2023, I visited the site reported in the concern. Upon arrival, the screen door to the house was open and the main door was shut. I approached, knocked, and gave them approximately five minutes before I returned to my vehicle. I then pulled together a list of fact sheets including open burning and managing construction and demolition waste along with my business card. I wrote a request to contact me on the paperwork. I hung this information on the screen door, then drove along the road that belonged to a neighboring property owner, with their permission. I observed multiple piles of material and some that looked like open burning may be occurring on the property. I then turned around to leave and observed that the screen door was shut and my information was missing.

After not receiving any contact by Tim Riley, renter on property, I looked into ownership via the parcel viewer. Redfox Unlimited LLC was listed as the owner. I then used this information to look into the owner of the LLC via the Secretary of State website. Lorraine Kusio and Leroy Porter as listed as organizers/members of the LLC. I mailed letters to them on October 24, 2023, and to Registered Agents Inc, who handles information based Redfox unlimited LLC.

It was requested to hear from the property owners by November 10, 2023. Additional followup will be required.

Followup at the property will be required to determine compliance with Missouri Solid Waste Regulations and required actions.

Concern No. 55258

Concern Info We live next to a saw mill that spews sawdust through out the neighborhood and has for years. EPA investigated this approximately 20 years ago and issued a letter stating it was in fact sawdust and less than 10 microbes which is a health hazard. This needs to be re-investigated and appropriate action taken. I would also like a copy of the original letter. We are tired of breathing this stuff and constantly cleaning our homes, cars, outdoor furniture etc.

I arrived on site around 10:05 a.m. on October 5, 2023. The weather at the time of investigation was raining, 65°F, 96% humidity and a southwest wind at six (6) miles per hour. I observed the sawdust load out for around 30 minutes, while observing the area around the load out while it was not being used remained around 10% opacity. This is due to the storage of the load out being filled with sawdust via metal piping from around the facility. The dust did not appear to travel very far from the point of generation and settled on to the ground. While I was observing the facility did load one (1) open top truck with sawdust. While the loading occurred, the opacity levels did increase to about 25%. The dust from the loading process also settled on the ground soon after and did not pass the property boundary. I will make a call to the facility in an attempt to find out if there has been any upsets recently with the system or planned maintenance for the near future.

I attempted to call the CP at 9:00 a.m. on October 6, 2023. The CP does not have a voicemail box set up.

No violations noted at time of investigation

Concern No. 55413

Concern Info Open burning of commercially collected household refuse on site during the night. Has happened many times before 10/3/2023.

Comments On October 6, 2023, I arrived in Madison County. With the concern that was submitted mentioning a waste disposal service, I stopped by the nearest transfer station, Fredericktown Transfer Station, and confirmed that Torrez does use them. While I was there, a sanitary waste truck arrived at the site for disposal. I then visited the site and met with Jeremy and Shannon, Torrez Sanitation owners. We discussed the situation, when asked if they had conducted any open burning on site, Shannon responded with just the burn barrel that her mother uses for her own residential waste. We discussed proper disposal and ensured that no waste was being dumped/burned on site. Based on a file and business review prior to arrival, I asked about a road on the property that leads south. Shannon responded that I was welcome to drive the road and observe the material back there. She stated that it wasn't anything being dumped, but from her father before he passed. It was primarily metal with some other materials that he recovered over time.

I then asked for permission to walk and drive the site. They responded that I was welcome to drive and walk wherever and they would help if I had any questions. I walked around the dumpsters and did not observe where any had waste stored on site. I also did not see any indications on what might be a spot they use for open burning. I didn't see any old burn piles or partially burnt trees. I then looked at the material on the south side of the property. From what I could observe, it was clear that the area does not see any use currently. I could see where different piles of homogenous material had been placed. I then arrived back at the office and discussed with Shannon that they try and slowly remove the material on the back side of the property.

At this time, no open burning was observed on site. Discussions for proper removal of recovered material occurred for future reference.

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegation as it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
--------	--------------------	---------------	---------------------------------	-------------	-----------------	--------------------	-----	------

Concern No. 55507

Concern Info The caller is concerned about how demolition waste is being handled at a four duplex demolition project in Cabool, Missouri. The caller is also concerned about whether or not the waste is being disposed of properly and whether or not any of the demolition waste is asbestos-containing building material. Two of the duplex buildings were demolished yesterday and it looks like the other two are being demolished today. The Concerned Party has requested that this concern be investigated today.

Comments I arrived at 427 Ozark Street in Cabool, Missouri at approximately 1:30 PM on October 6, 2023. I pulled into a parking lot on the other side of Ozark Street and observed the demolition site. There were only two residences still standing of the original four. A Bobcat E145 excavator was onsite loading debris into a dump truck. The dump truck was a Dotson Excavating dump truck. After a while, the dump truck left the site and only one individual in the excavator was left onsite moving debris. I noticed a small pile of miscellaneous debris onsite as well which looked to contain some scrap metal, pipes, a sink, etc.

I called the number on the side of the dump truck for Dotson Excavating, which put me through to Riley Dotson, Owner of Dotson Excavating. I explained to Riley that I was at the demolition site investigating an environmental concern that we had received that same day. The first thing I asked Riley was whether or not there was an asbestos inspection conducted prior to demolition. Riley was not aware of an asbestos inspection being performed on these residences. Riley expressed that he has done several residential demolition before and is rather familiar with the asbestos regulations, but was unaware that these two residences being so close would still warrant an inspection and notification. I talked with Riley about our rules on an "installation".

Riley informed me that only two of the apartments were being demolished. He planned to use the rock, concrete, and brick (clean fill) to fill in the basements of the two demoed structures. I asked Riley where the debris/waste was taken prior to my arrival. Riley said that everything except the clean fill was taken to Black Oak Landfill in Hartville, MO. Riley told me that the majority of the structures were made of hardwood, stucco, and sandstone. Riley told me that the property owner's name is Bobby Stannum and that his phone number is 417-630-1538.

I told Riley that in order to return to compliance, he would need to have whatever is left onsite (debris, rubble, etc.) inspected by a Missouri certified asbestos building inspector and submit a demolition notification to the Asbestos Unit. After concluding my phone call with Riley, I left the site. Riley contacted me not long after I left saying that John Cable with Triangle Environmental would conduct the asbestos inspection. I called Riley on October 16, 2023 and he said that he hadn't gotten the report back from John yet, but was told that there was no asbestos found. I called John Cable on October 26, 2023 and he emailed me the asbestos inspection report for the two structures demolished in Cabool showing that there was no asbestos found.

A demolition notification was sent to me on October 30, 2023. I forwarded this notification to the Asbestos Notifications email on November 1, 2023.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
SERO	10/12/2023	10/12/2023	Tim Hampton, Plant Superintendent	Farmington St. Francois	Fugitive Particulate Matter	HC		

Concern No. 55305

Concern Info Caller stated that the quarry behind their property is causing dust issues, that the quarry is causing the roads nearby to become difficult to drive due to poor visibility caused by the dust. Caller stated that the highway patrol on some instances. Caller also is concerned about the intensity in which the facility blasts, stating that at times it has caused pictures to fall and rattle.

I spoke with the CP on October 12, 2023 via phone. This conversation was meant to better understand the concerns the CP had and to get more information regarding the location of the CP in relation to Central Stone.

Comments

I arrived at the CP residents around 9:45 a.m. on October 13, 2023. We discussed the nature of the concerns regarding Central Stone and the CP shared photographs she had taken recently. The CP stated the sand and grit in her pool is from fugitive material emitted by Central Stone and that many of her neighbors have the same issue. The CP also stated that she had been in contact with the blasting company and stated when the blasting company asked Central Stone for seismograph readings Central Stone was either unable or unwilling to provide them to the blasting company. The CP stated her main issue at the moment is the truck traffic from the facility onto Hildebrecht road, stating the trucks drive recklessly and travel at excessive speeds in and out of the facility. I explained that the Department of Natural Resources does not regulate blasting and we do not have any control over the truck traffic, but that I would recommend to the facility that the truck drivers be made aware of the dissatisfaction of the residents in the area and that I would also recommend that the water truck be operated more frequently. I thanked the CP and left the property.

I arrived at the facility office at 10:10 a.m. on October 13, 2023. The Plant Superintendent is Tim Hampton who is currently on vacation. I was directed by phone to Mike Martin the Operations Manager for the St. Louis facility who was onsite the morning of October 13, 2023. Mike Martin explained that there is full transparency between Central Stone and Buckley Power which Central Stone contracts for blasting. Mike Martin also provided the area contact for Buckley Powder who is Josh Crowder, and stated that Josh Crowder would be happy to provide information about this matter if needed. Mike Martin and I discussed the facility's use of water to control dust emissions. Water trucks are utilized for haul roads around the facility. The facility's crushing operation is equipped with spray bars and the spray bars are used at all times when the facility is operating. Mike Martin stated that the asphalt plant is wrapping up operations and should be off site in a few days. The asphalt plant was operated by Magruder Companies. I viewed the Magruder Company hot mix asphalt portable batch plant before arriving at Central Stone and did see that dismantling of the portable asphalt plant to prepare for transport had begun.

SLRO	9/20/2023	9/13/2023	Unknown	St. Louis City	Odor	KH		

Concern No. 54983

Concern Info Recieved an anonymous odor concern from the I-70/270 online odor concern form. The CP says they smell a rotten egg odor coming from the construction site located next to the given address. The CP said they smelled the odor between 1130am and 730pm on 9/13/23

Comments When I visited the site of the concern, I was able to speak with Stan Zielinski, Project Manager of the construction company at question. I explained to him that we received a concern call from his location and was investigating it. I told him that there was a smell of rotten eggs coming from the area on 09/13/2023 and I asked him if he had smelled anything or if his employees complained of anything. He said no. He said that there was a faint rotten egg smell the previous week and it was due to a lateral sewer line that had not been connected to the main sewer at a house next store to their project site. He said that the sewer lateral has been connected since and inspected by the City of St. Louis. While I was on location there was no smell.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 54976								
Concern Info Received concern from DNR concern webpage. "I have a so-called neighbor living less than 1/8 mile from me who is constantly burning all kinds of trash - about 8 times a week. He is burning tires, plastic, shingles stuff like that. Because of his burning, I am having breathing issues. we have tried talking to him to get him to stop and reported him to every office I can with absolutely no help. He is living in a condemned house with no water, electricity, or septic. He gets some water from his neighbor by a garden hose. We have lived with his burning this crap for over a year. He calls himself a scraper. His yard is all junked up with all kinds of trash, he will take your trash when you pay him money to get rid of it. I do not know what his name is but he is the house at the corner of Leffingwell and Springfield Rd in Stanton, Mo. 63079. I am contacting you as I do not know of anything else I can do. I am hoping you will be able to help. Thank you. Vivian"								
Comments								
9/19/23 - RLA - I looked up the site on the Franklin County Assessor Office webpage. The site belongs to Shane Rodgers and the address is 2136 Springfield Ave.								
9/21/23 I drove out to the concern with a Solid Waste inspector, Shannon Hambrick. We arrived shortly after 2 pm. It was sunny, with light wind. There was a woman at the property loading up certain items named Rebecca Paul. She stated she rented at this property and had nothing to do with the open burning. She was loading a minivan with certain items out as she appeared to be moving. There was no vapors, odors, or plumes present. We did see a burn pile in the back yard, but nothing burning at the time of the visit. We handed her paperwork for open burning and hazardous waste, as well as my business card. We told her to get that to the owner, and have them contact us with any questions. She also stated that the property was going to be potentially bulldozed and had no water or electricity hook up.								
9/22 called Sullivan fire district. They did not have any reports going to this property.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 55198 Concern Info Spoke with Patricia Thompson regarding an open burning concern at 486 Hwy Z, Whiteside, MO 63387. Patricia told me that Wayne Kaiman owns the property and that someone was burning illegal materials again. Patricia sent photos of the pile being burned and within it were roofing shingles, plastics, siding, and treated lumber.								
Comments I went out to the site again, at the time of my visit there was no fire burning. This location is a previous location that I visited 3 times for air pollution concerns. Though there was no fire burning, there were still illegal materials in the burn pile (treated lumber, shingles, siding, and plastics). I got a chance to speak with Wayne Kaiman during this visit, told him what he can and cannot burn, handed him some fact sheets on open burning, and told him how to resolve this issue. Wayne said that he did not want any trouble from us, so he is going to just get a dumpster and dispose of the items instead of burning anymore.

Concern No. 54978

Concern Info Received an anonymous hand written concern in the mail. It states "This is a complaint about 3550 Gravois road, 63051. This is a tree service who burns material 24 hours a day 7 days a week. He has customers bring brush to burn all the time. It fills the area with smoke. The fire department will not do anything with it. Hopefully you can investigate it and see if it can be stopped. Hansen Tree Service. "

Comments

9/21/23-RLA-I looked up the address and the site belongs to Michael and Christine Haskins. I also looked up on SharePoint and this is the first concern we have received at this address.

On 9/26/2023, I went to the above location to investigate the smoke concern, when I arrived I noticed smoldering and smoke leaving coming off a burning pit, I called Mr. Mike Haskins to discuss and find a solution to eliminate or minimize the smoke that is leaving to neighbor's property.

Mr. Haskins told me that he burns only tree stumps and he burns maybe once a week not 24/7.

Mr. Haskins promises he will minimize the smoke coming off his property.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 54984								
Concern Info Received concern from EPA. "Very strong plastic chemical burning smell. It happens every few days. Sometimes in the morning and sometimes in the evening. We have to close all our windows as the smell causes headaches and makes us feel unwell. Alleged Violator's Latitude / Longitude 38.605462 / -90.217324. "								
Comments MSC 9/20/2023 I called the concerned party (CP) to gather more information about the smell. The CP was aware of the EPA's Involvement in Veolia the situation. I explained that I would be going out that afternoon to see if any odor determinations could be made. The concerned party stated she could smell the odor currently around the Blues City Deli in the Soulard area and also stated she was concerned about any potential health effects. She also stated that the smell seemed worse when the wind was blowing west. Another inspector, Robert Barnacle, and I drove the "South City Loop" this includes stops at facilities such as: JD Streett (3800 S 1st Street), Millipore Sigma (3300 S 2nd Street), Schaeffer Manufacturing (102 Barton Street), US Paint (831 S 21st Street), Willert Home Products (4044 Park Ave), Midwest Industrial Chemical (1509 Sublette Ave), and Chemisphere (2101 Clifton Ave). Note that we made a stop at Blues City Deli (2438) as well. During our investigation we drove with windows down and stopped at each area. We did not smell any odors that would be described as plastic or chemical burning nor were any smells very strong.

<p>Concern No. 55312</p> <p>Concern Info Nicole Boher called to get updated on previous concern she had put in about 100 N Ethlyn Rd. Winfield 63389. I had been the inspector to go out on that call, so I explained that I had never received a fire report detailing the open burning they saw, including the contents being burnt. Since I had never received that I had to close the concern. She stated her neighbor was open burning again while on the phone with me. The CP's neighbor is burning car parts in the morning. This is creating what they described as a horrible smell that prevents people from using the patio of her business. The CP indicated that the Winfield-Foley Fire Protection district has been contacted, and that they may have documentation of these fires. This is the 3rd concern at this residence.</p> <p>Comments Previous concerns can be found in Sharepoint under 6277 and 4600.</p> <p>On September 22nd, 2023 while I was on phone duty Nicole, the original concerned party, called again to get a status update on the concern. I explained that I never got the fire report from Aaron Lee, Winfield Fire Chief, so I had to close the concern. She told me she would call Aaron to get the report sent. Coincidentally Missouri DNR had two analysts out in Lincoln County at the time of this call. I got them to go out investigate after their fire dept. meeting in Lincoln County. I called Nicole back to alert her of that action.</p>

--------	-----------------------	------------------	------------------------------------	-------------	-----------------	-----------------------	-----	------

Concern No. 55201

Concern Info Received an anonymous concern through the DNR website. The concern stated "The Union Ambulance District owns two buildings slated for demolition very soon, the buildings are very old and could possibly present a health hazard as they probably have lead paint and or asbestos inside them, the buildings are close proximity to a elementary school and multiple businesses downtown Union, addresses are 201 Church St and 220 Oak St, Union, MO. 63084."

Comments 9/27/2023-RLA- I looked up the addresses mentioned in the concern. Both addresses appeared to have been a business at one point in their history so they are not exempt from regulations.

9/28/23 - RLA - I called the Union Ambulance District, but the Chief was in a meeting. I left my contact information with the dispatcher. Ms Michelle Mayer called me back and she confirmed that the two buildings will be demolished in the future. She said she is still getting bids from demolition contractors and will make them do asbestos inspections before the buildings are torn down. I emailed her a fact sheet and explained to her the process of properly notifying the state.

<p>Concern No. 55313</p> <p>Concern Info Recieved a concern from the DNR Concern website that states "Front yard burning 100s of tires and plastic items"</p> <p>Comments 10/2/23-RLA- This is the third concern we have had at this address. The other two can be found on Sharepoint Forms 4782 and 4989.</p> <p>10/2 SEL reviewed site address and previous concern forms.</p> <p>10/04 SEL contacted Winfield Foley Fire Protection District and requested fire reports for the address.</p> <p>10/04/ SEL Robert Andrews, Environmental Program Supervisor, and I visited the property. We did not witness any open burning on the property at the time. There was purple paint and no trespassing signs posted around the property. From the public road, a burn pile is visible and appeared to contain durable goods and other materials. Following the site visit, we stopped at the Winfield/Foley Fire Department to receive any fire reports on the property. The Fire Department responded to two incidents at the property and gave us the respective reports.</p> <p>The first incident occurred on April 8, 2023. The initial concern listed 241 Pleasant View Drive as the incident location. Upon arriving, the fire department located the fire and smoke column at 131 Pleasant View Drive. The report specified two fires on the property involving tires. The responders were only able to extinguish one fire at the time. Personnel spoke to the property owner and explained open burning regulations before leaving the site.</p> <p>The second incident occurred on May 26, 2023. In route to the incident, the fire unit contacted law enforcement to assist in the response, due to a previous incident. A burn pile was active, and personnel observed a tire burning. It was noted that the homeowner was being uncooperative. The homeowner began to put out the fire with a water hose. While putting out the fire, the homeowner made comments threatening gun violence. As the responders were returning to their vehicles, they heard gunfire coming from the property.</p> <p>On 10/5/23 and 10/7/23, The RP had additional open burning events. Kathleen Hertling and Shannon Hambrick investigated the site on 10/11/23. The construction debris/tires/plastic drums that were identified on 10/4/23 were gone and assumed to be burned due to the large ash pile where the items were stored. Additional new construction waste was identified on the property as well.</p>

Concern Info Received an anonymous concern in regard to open burning of illegal materials (construction waste and trash including plastics). The CP said that the smoke was thick and black.								
Comments On 10/10/23-KMH- I called Fire Chief Dave Chibster with Northwest Fire Protection District to see if he could respond. He was going to look into it, but he did not get back to me.								
On 10/11/23, I went to the addresses of:								
130 Falcon Pointe Drive								
4 Falcon Pointe Ct.								
Lot 43 on the corner of Falcon Pointe Dr. and Falcon Pointe Ct.								
I looked into the only burn pile they had and it was natural wood product and very small. There was no other materials found in the burn pile. I also spoke to 2 contractors onsite and reminded them of what materials can and cannot be burned.

Concern No. 55547 Concern Info Recieved a concern from the DNR Concern webpage. It states " How do I go about having the air quality tested for my neighborhood? Periodically,there are times when we notice a foul smell in the air. It settles into our house and makes it smell like trash or as if something died in the walls. For years, I had assumed it was something in our house, but friends and neighbors have commented on the smell as well -- when not in our house. The smell is not constant. It comes and goes and is more putrid at times and other times the air smells fresh. It's only when notice it that I question where it's coming from. I would like to know what is available to me to test the smell and see if it is something I should be concerned about. I cannot pinpoint a responsible party/facility. We live very close to the industrial court in Arnold (Arnold Tenbrook and Manufactures Dr) and across the river from the MSD Lower Meramec Wastewater facility"								
Comments On 10/17/2023 at 9:00 AM, I went to investigate the above concern, I did not smell any odor or any bad smell.								
SLRO	10/11/2023	10/11/2023	100 N. Ethyln, Winfield, Mo	Lincoln	Open Burning			
Concern No. 55549 Concern Info Ms. Nicole Boyer called about the neighbor burning car parts again in a 55 gallon drum. The neighbor is currently burning and Ms. Boyer will be calling the fire department. This is the 4th concern we have recieved at this address. 10/11/23-RLA- This is the fourth concern at this address. A letter of warning was mailed out to the owner of the property and the resident on 9/29/23. I advised Ms. Boher to contact the fire department to put the fire out and we would get the fire incident report from them.

--------	--------------------	---------------	---------------------------------	-------------	-----------------	--------------------	-----	------

Concern No. 55470

Concern Info Recieved an email from Mr. Darrin Chapman of Gunther Salt regarding visisble emissions coming from SA Recycling.

Comments 10/13/23 SEL contacted the CP regarding the concern, and asked if there was any further information they would like to share. No response was recieved.

10/13/23 Another SLRO inspector visited the site in the morning, and did notice visible emissions but noted that the emissions did resemble steam.

10/17/23 SEL conducted an investigation of the site. I drove around the surrounding area, along branch street, wharf street, and along market street. I did notice visible emissions from the shredder, however, the emissions strongly resembled steam. I stopped along wharf street and captured photos of the emissions. Following my investigation, I stopped in at the main office and asked to speak with an EHS or Plant Manager. I met with Alex Richmond, Regional Operations Manager, and his coworker Blake. I explained that we had recieved a concern regarding visible emissions from the shredder. I explained to him what I observed while I was invesitigating. He explained that the shredder has a water injection system that is used during operation to control heat and any particles that may have been left on the metals (dirt, debris, etc.) He explained that the water injected turns into steam plumes that leave the shredder. I asked him if there was any unusal operations that occured on 10/12/23 that would have caused visible emissions that were not steam. He explained that there has been no change in operation, no malfunctions, and no unordinary material shredder in quite some time. Due to a recent permit change that is currently in technical review, I asked if there were any permit conditions that he was aware of that would include visible emissions observations. He stated he was not aware but would check in with the environmental team for the company. I told Alex Richmond that I did observe steam during the investigation and that I did not notice any violations at the time of the investigation. I thanked Mr. Richmond and Blake for their time and left the facility.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 54590 Concern Info CP called about the City of Norwood power washing and refinishing the city's water tower since Monday 8/14/23. The paint chips and debris being blown into the neighboring properties of the restaurant and church. Caller is concerned that the third party the city hired is not cleaning up and disposing of the debris properly.								
Comments SharePoint #6266 I arrived to the water tower location at 11:30 a.m. and it looked like the crew who was sandblasting had been done with their maintenance for quite some time. A roll off dumpster was still on site with materials in the dumpster. I then went to City Hall to try and get more information on who was conducting the sandblasting, when they had finished the project, and when they were planning on taking the roll off dumpster for disposal. When I arrived at City Hall, I was told that the mayor and all the city workers were just down the road conducting a city clean up. I followed their clerk down Boulden Ave to the city park where I met with Steven Jarrett, mayor of Norwood, and Paul Whited, their wastewater and public water works director. Jarrett informed me that the crew who had conducted the sandblasting was Cunningham Sandblasting out of Joplin and that they had been finished working for some time, but were waiting for payment to come collect the roll off dumpster. I told Jarrett since it had been some time since they had finished working, there were no violations regarding fugitive emissions and gave him my card to keep in case they needed to refer to the Department for anything in the future.

Concern No. 54838

Concern Info Wendy Stone called saying the smells at IsoNova are still bad.

Comments SharePoint #6588-At 9:04 a.m., I detected excessive odorous matter deriving from the IsoNova Technologies facility on county road 1155. During the investigation, I verified two detections at least 15 minutes apart and within one hour of odors exceeding the 7:1 dilution threshold, confirming a violation of the regulations outlined in 10 CSR 10.6-165. The odors were similar to a burnt-egg odor, which is an odor known to originate from the IsoNova Technologies facility. Initial weather conditions consisted of a 79° F temperature, 87% humidity, 0% cloud cover, and northeast bound winds at 5 mph. Weather conditions for the second detection were identical. After I recorded the two detections with the nasal ranger, I again double checked that there were no odors from other facilities or land application practices in the area.

The first detection on August 25 occurred at 9:04 a.m., and the second detection occurred at 9:20 a.m., both detections were at the dilution-to-threshold ratio of 7:1. Both locations of these detections were northeast of the facility and off of the facility property. Before setting the nasal ranger to a 7:1 dilution, I fully activated the filters and held them to my nose to clear previous odors that could have obscured measurements. Between each nasal ranger detection I drove upwind of the facility property, rolled my car windows up and ran the AC on non-circulated mode to clear my nose of lingering IsoNova odors.

I called recent concerned parties after this investigation to inform them of my findings. I also attempted to call Dan Bowers, environmental manager of IsoNova technologies, to inform him of my findings.

Conclusions

During this investigation I observed excessive odorous matter derived from IsoNova Technologies. This violation will be added onto the existing NOV #230053.

Concern No. 54834

Concern Info Wendy Stone called on Sunday stating that rotten egg smell lasted for a couple of hours in the afternoon.

Comments SharePoint #6545-At 8:40a.m., I drove north of the IsoNova Technologies property on P highway west of state highway 39. I detected excessive odorous matter deriving from IsoNova at this time. Weather was 62 degrees fahrenheit, 12 mph northbound, 50% cloud cover, and 74% humidity. After this detection I drove to Stone's address to discuss my findings and clear the smells out of my car and my nose. I spoke with Stone and another CP for 20 minutes then drove back towards P highway. At 9:04a.m., I got another detection with the nasal ranger. After this, I drove to IsoNova Technologies and asked to speak to Dan Bowers. Dan Bowers was on leave, so I just asked the front desk to relay the message that there was a violation of their facility. I then drove around the IsoNova Technologies property boundaries on the various roads to ensure that the smells were not deriving from any other facilities, such as those in Verona proper. Later that afternoon, I called Willard Bontrigger, another CP that had put in a concern the same exact time I investigated IsoNova, to inform him of my findings. I observed excessive odorous matter deriving from IsoNova Technologies, which counts as a violation and will be added on to their existing enforcement process.

Concern No. 54830

Concern Info The reporting party states that when she opened her windows this morning she could really smell the "dog food plant". She informed us that this is an on going issue. She called at around 10:30am.

Comments Sharepoint #6567

I began the investigation by checking Google Maps to identify what dog food plants would be in the vicinity of the CP's address. The two plants identified were Heartland Pet Food and Red Collar Pet Food both located on 32nd St near Prigmore Ave and 26th St. I drove around the perimeter of Heartland's and did not detect an odor until I reached the intersection of 26th and Prigmore Ave where I detected a very slight odor of dog food, but it was not strong enough to detect with the nasal ranger. I then drove down 26th St to see if there was an odor coming from Red Collar Pet Food. There was no odor of dog food at this location, either. No violations were found in regard to this concern.

No violations found during the investigation.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 54831								
Concern Info This concern is from the EPA citizen tip line. EMAIL Smoke and vapors from pipes on top of factory leaking black smog and is making us have respiratory issues. Also leaking waste in back of plant possibly. The alleged violators information is: Ajinomoto Foods North America, 3131 S. Quail Ave, Joplin, Missouri								
Comments SharePoint #6568 I arrived to the facility at 10 a.m. and did cursory observations before I approached the facility. Upon initial observation, there were no dark black emissions visible and the back of the plant was inaccessible by public access, so there was no way to evaluate what the state of the back of the facility was by cursory observation. I approached the facility and presented my credentials and requested to meet with a manager. I was informed that all managers attend a daily meeting from 10 a.m. to 11 a.m. but someone would be available to meet after that. I then left the facility to investigate other concerns in the area so I could return when a manager would be available to walk me around the facility. At 11:15 a.m. I returned to the facility where I met with Chris Ediger, the safety and environmental manager, Jeff Glasgow, general manager, Micah Whited, and Scott Cantrell, who was their main environmental engineer. During this meeting we discussed their current permits and they informed me that they had recently had an environmental engineering group, Ramboll American Engineering, come and evaluate whether or not they were applicable for an operating permit. I had Ediger email me the report from Ramboll confirming that they were exempt from obtaining an operating permit, and then we went on a walk around the facility. During the walk, we discussed some of the opacity and odor regulations that would apply to Ajinomoto so that we were all on the same page in terms of what was being evaluated during the investigation. I informed them that we did not have an odor concern, but it was a potential regulation that they may encounter in the future given the nature of their production of fried foods. Ediger, Whited, and Cantrell took me around the back of the facility where I confirmed there was no discharge point for potential waste to come out of. After ensuring that there were no regulatory violations, I asked if they had any questions for me and thanked them for their time.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 54923								
Concern Info Email states that American Tripoli is blowing fugitive dust out of the south end of the facility								
Comments SharePoint #6615 I arrived to the facility at 9:50 a.m. at the corner of Washington Ave and Billings St to begin surveillance. The winds were coming out of the south-southwest at 7-10 mph with clear skies at 64 degrees Fahrenheit and 76% humidity. Upon initial inspection, the large green stack appeared to have heavy emissions coming out of it and fugitive emissions were also leaving the property out of the south end of the facility. From the initial inspection, it appeared that the stack was emitting more than the allotted amount of 40% opacity on a frequent basis, so I decided to conduct a Method 9 evaluation on the stack to determine if they were out of compliance. The results from this evaluation are still being determined to identify whether the facility was out of compliance for this regulation as well. At 10:15 a.m. I moved locations to try and track the direction the fugitive emissions were traveling. I went north on Curtin Ave and took a left on Ottawa St to Billings St so I would be facing south directly towards the facility. When looking to the east down Oneida St, you could see a haze all the way to Hwy 43 from the fugitive emissions. I approached the facility to get in contact with Joshua Townsend, the facility's environmental specialist, to discuss the findings of my observations. At 10:30 a.m. I met with John Spears, plant manager, and Townsend to find out what issues the facility was having. Townsend informed me that maintenance had been conducted on one of their dust control systems the previous Friday, 9/15, which correlated with a different concern the Department had received. I informed both Spears and Townsend that this violated 10 CSR 10-6.050 Start Up, Shut Down, Malfunction Conditions and that I would have to cite them for this violation as well as 10 CSR 10-6.170 Restriction of Particulate Matter to Ambient Air Beyond the Premises of Origin. I also informed them that they may receive a citation for 10 CSR 10-6.180 Measurement of Emissions of Air Contaminants for potentially going over the allotted amount of 40% opacity. These citations would result in a RNOV being issued to the facility, given the history of non compliance with these regulations. We also discussed the situation regarding their used oil and how to dispose of it properly, as well as their used oil tank that is located underneath the steel tube mill. I informed them that I would reach out to our Hazardous Waste Unit to try and determine a location that this material could be disposed of properly. The conversation lasted approximately an hour and a half. I informed the facility to reach out in the future if they conducted any maintenance on their dust collection systems and thanked them for their time. I asked if either Townsend or Spears had any questions for me and I left the facility by 12 p.m.

--------	--------------------	---------------	---------------------------------	-------------	-----------------	--------------------	-----	------

Concern No. 54924

Concern Info Email states that American Tripoli is releasing fugitive emissions from their facility from the south end of the facility.

Comments SharePoint #6604

I arrived to the facility at 9:50 a.m. at the corner of Washington Ave and Billings St to begin surveillance. The winds were coming out of the south-southwest at 7-10 mph with clear skies at 64 degrees Fahrenheit and 76% humidity. Upon initial inspection, the large green stack appeared to have heavy emissions coming out of it and fugitive emissions were also leaving the property out of the south end of the facility. From the initial inspection, it appeared that the stack was emitting more than the allotted amount of 40% opacity on a frequent basis, so I decided to conduct a Method 9 evaluation on the stack to determine if they were out of compliance. The results from this evaluation are still being determined to identify whether the facility was out of compliance for this regulation as well.

At 10:15 a.m. I moved locations to try and track the direction the fugitive emissions were traveling. I went north on Curtin Ave and took a left on Ottawa St to Billings St so I would be facing south directly towards the facility. When looking to the east down Oneida St, you could see a haze all the way to Hwy 43 from the fugitive emissions. I approached the facility to get in contact with Joshua Townsend, the facility's environmental specialist, to discuss the findings of my observations.

At 10:30 a.m. I met with John Spears, plant manager, and Townsend to find out what issues the facility was having. Townsend informed me that maintenance had been conducted on one of their dust control systems the previous Friday, 9/15, which correlated with a different concern the Department had received. I informed both Spears and Townsend that this violated 10 CSR 10-6.050 Start Up, Shut Down, Malfunction Conditions and that I would have to cite them for this violation as well as 10 CSR 10-6.170 Restriction of Particulate Matter to Ambient Air Beyond the Premises of Origin. I also informed them that they may receive a citation for 10 CSR 10-6.180 Measurement of Emissions of Air Contaminants for potentially going over the allotted amount of 40% opacity. These citations would result in a RNOV being issued to the facility, given the history of non compliance with these regulations. We also discussed the situation regarding their used oil and how to dispose of it properly, as well as their used oil tank that is located underneath the steel tube mill. I informed them that I would reach out to our Hazardous Waste Unit to try and determine a location that this material could be disposed of properly. The conversation lasted approximately an hour and a half.

I informed the facility to reach out in the future if they conducted any maintenance on their dust collection systems and thanked them for their time. I asked if either Townsend or Spears had any questions for me and I left the facility by 12 p.m.

An RNOV will be issued for the violations cited during the investigation.

SWRO	9/25/2023	9/18/2023		Springfield Greene	Odor	BD		

Concern No. 54921

Concern Info See attached email. CP smells a chemical odor like bleach or burning chemicals near address noted below. Has noticed it multiple times along with a haze/fog. Stings eyes.

Comments SharePoint #6631

I drove around the area of concern from 8:20 a.m. to 8:30 a.m. with the windows in the vehicle down but did not detect any odor. I checked the area for locations that may be responsible and noted that there is a transfer station due north of the location the odor was identified. I then called the CP to let them know what I found during the investigation.

No violation

------	-----------	-----------	------------------------	--------	------	----	--	--

Concern No. 54935

Concern Info Caller states that either the land app field or Evans Basin is smelling horrible. Caller stated that they land applied over the weekend and didn't think the smell would be as bad as it is two days later. Wind is out of the south

Comments SharePoint #6637-On the morning of September 18, at around 11a.m., I drove westbound on Quince Rd? as I passed north of the basin. While I did detect excessive odorous matter at that point, I noticed a tractor headed north on Walleye Rd that was getting ready to land apply. Land application of fertilizer is exempt from odor regulations as it is an agricultural practice. I called concerned parties after this investigation to inform them of my findings. I did not observe any violations during this investigation. No action is required.

Concern No. 54910

Concern Info Odor from this facility is very bad. Wind from the south

Comments SharePoint #6651

At 8:40a.m., I drove north of the IsoNova Technologies property on P highway west of state highway 39. I detected excessive odorous matter deriving from IsoNova at this time. Weather was 62 degrees fahrenheit, 12 mph northbound, 50% cloud cover, and 74% humidity. After this detection I drove to Stone's address to discuss my findings and clear the smells out of my car and my nose. I spoke with Stone and another CP for 20 minutes then drove back towards P highway. At 9:04a.m., I got another detection with the nasal ranger. After this, I drove to IsoNova Technologies and asked to speak to Dan Bowers. Dan Bowers was on leave, so I just asked the front desk to relay the message that there was a violation of their facility. I then drove around the IsoNova Technologies property boundaries on the various roads to ensure that the odors were not emanating from any other facilities, such as those in Verona proper. Later that afternoon, I called Willard Bontrigger, another CP that had put in a concern the same exact time I investigated IsoNova, to inform him of my findings.

--------	-----------------------	------------------	------------------------------------	-------------	-----------------	-----------------------	-----	------

Concern No. 54920

Concern Info From email: Horrible air smell at late night and early mornings smells give bad headaches, smells like sulfur really strong and poop at night and on weekends and anytime their facility is closed for non contact is when the smell is the worst.

Comments SharePoint #6649

I arrived to the perimeter of the property and began driving around to find the extent of where the odor was traveling. I began by going north on N Peace Church Ave until I hit the 4 way intersection with Fountain Rd, and then I went west on Fountain Rd until I hit N County Ln 272. I drove down into the culdesac until I hit the southernmost point where I could detect a faint odor of sewage. I then drove further west on Fountain Rd until I hit Marin Ave, where I turned south and went down that road until I could again detect the smell which was stronger at this point. I decided this was the point where the odor was the strongest and went east on Fountain Rd to clear my nose from 1:25-1:30 p.m. At 1:30, I returned to Marin Ave to use the nasal ranger to get a detection. I was unable to get any detections with the nasal ranger, but a local resident told me to try down the road near Black Cat Rd near the bridge. I went to this location, but there was no odor in the ambient air. No violations were identified at this time.

No violations identified during the investigation.

Concern No. 54930

Concern Info Dozer Keithley of the Clever fire department called saying he had multiple concerned parties worried about fugitive emissions from vegetative waste burning from 886 K Hill Rd in Clever. Jeremy Mitchell was one of the concerned parties and said that the ash has visibly entered their neighborhood twice in the past four days. Mitchell thinks that the responsible party is the property owner of 886 K Hill, Scott Thompson. Mitchell thinks that Thompson is only burning vegetative waste, but he is concerned about the health of his family and his neighbors. He says he cannot work outside anymore because the ash is unbearable. Mitchell said Thompson's largest burn pile (near the pond) was upwards of 50 cubic yards of vegetative waste. Another concerned party, Roger Marr, may call us. His phone number is 417-583-3052

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 54933 Concern Info Caller states that a land clearing operation near their neighborhood has been burning large amounts of vegetative waste and ash is falling all over the neighborhood. There is also a strong campfire odor that has been permeating the area for some time and has become obnoxious. On the day the concern was received, the ash and odor has been at it's worse. Caller is concerned about the air quality in the area and would like for someone to follow up on this to see if the burn piles are large enough to warrant an air curtain incinerator.								
Comments SharePoint #6663 At 8:47 a.m., I arrived on the property of the land clearing operation. Shortly thereafter, I met with Carl Dobyns, one of the construction workers with Kenny Singer Construction. I introduced myself and explained the reason for my visit. Bailey Dietz and I had been on the same site a couple of weeks ago for similar concerns. Dobyns explained that they will finish open burning in a week or two from now. I asked Dobyns whether ash has visibly flown onto the nearby neighborhoods, and he stated that they have been doing their due diligence to mitigate the fugitive emissions. Because I visited the site after heavy rains, I did not find any evidence of fugitive emissions from previous burn days. Dobyns pointed me to two of their burn piles (each one was about 40 cubic yards), and I noticed that the plumes were floating away from the neighborhoods. Dobyns thinks some of the concerns came in on Monday, when weather conditions were unfavorable. Tyler Bussell approached us roughly 10 minutes after my arrival. Bussell is the owner of the land clearing business. Bussell confirmed that the land clearing operation is almost finished. I left the property at 9:09 a.m. Later in the afternoon, I called all CPs related to this concern and explained that the land clearing operation is almost over. I requested that they call our office if the ash is visibly entering their neighborhood again and that we would try to respond as soon as possible before the rains washed away any evidence.

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegations as it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 54934								
Concern Info Caller states that there has been an old building, possibly a barn with asbestos, that has been burning and smoldering for the last three weeks. It is starting to have adverse effects on those who live nearby and people are developing respiratory issues. No information is available on the owner, but the building was still smoldering on the date the concern was received. The caller was asked to call the fire department if they noticed the building was still burning/smoldering when they drove back by. The building is located near the Mile Marker 10 point on Highway 76 on the north side of the road.								
Comments SharePoint #6661 At approximately 12:30 p.m., I attempted to reach Bobby Umberson's property, the property with the alleged hay burning. I saw the hay in the barn smoldering as I drove by the property on I-49. The open-air barn was entirely made of metal so there should be no threat of asbestos contamination. Nothing was burning except for hay. Unfortunately, the gate to the property was closed and locked so I could not continue the investigation in person. At 1:39 p.m., I had a phone conversation with David Abbott, the Anderson FD chief. Abbott informed me that he had been out to the barn several times in the past week in attempts to extinguish the smoldering hay. Abbott readily provided me Umberson's contact information so I could keep in touch. Later in the office, at around 2:34 p.m., I spoke with Umberson on the phone. Umberson told me that he was trying to extinguish the hay as much as anyone else since he is losing money due to the fire. Umberson stated that the FD told them they cannot do much about the smoldering, because if they try to dig through the hay to find the source of the fire, it could exacerbate the burning. Umberson thinks the best course of action is to let the smoldering finish. Regardless, the hay burning is vegetative waste and consequently does not violate any Missouri open burning (or asbestos) regulations. At 2:39 p.m., I left a voicemail for the CP Amanda Gibbs explaining my findings.

Concern No. 54929

Concern Info Odor from Protein Solutions, see attachment

Comments SharePoint #6676

At 12:45 p.m. I arrived outside the facility and parked in the Hope Springs parking lot across 32nd St to the northeast. Winds were out of the south at 5-8 mph with 66% humidity and 75 degrees Fahrenheit. I used the nasal ranger for roughly 2-3 minutes, but was unable to detect any odor. While driving past the facility, there was a slight odor directly in front of the facility, but it was not detectable with the nasal ranger. I then left the area to work an unrelated concern just a few minutes away.

I returned to Protein Solutions at 2:15 p.m. to attempt another odor detection. I was able to get my first detection at 2:16 p.m. while driving past the facility on 32nd St, so I left the area to clear my nose for 15 minutes. At 2:31 p.m. I returned to the 32nd St area to try and get a second detection, but I was unable to get the second detection after driving around the area for roughly 5 minutes. No violations were observed during the investigation.

The following day, the CP contacted me during office hours to discuss my findings. I informed them that I was not able to get a second odor detection, so we would not have an open violation to track in our system.

No violations observed.

Concern No. 54937

Concern Info dust from the tripoli is spreading everywhere, dust even out of the building. - - Lost connection from caller but same old complaint about their dust problem

Comments SharePoint #6697

I arrived to the facility at 10 a.m. and parked in the Dairy Queen parking lot due south of the facility on Washington Ave. Upon initial observation, there were no present emissions at the time and the facility was quiet like it was currently shut down. I decided to watch the facility for 30 minutes to see if the facility was running, but potentially at half capacity. After 30 minutes and no emissions, I approached the facility to see why they were not operating.

At 10:35 a.m. I went to the American Tripoli office where I met with Townsend to discuss why the plant was not operating. Townsend informed me that they were currently replacing filters in the green hulk, the large baghouse, and that they were also doing some routine cleaning. Townsend also informed me that they were going to replace a bearing on a scroll that feeds to the tube mill, so they likely would be out of operation until tomorrow (9/26) mid morning time. Townsend did mention that they had just gotten 2 boxes worth of new filters to replace at the facility and they would be working on getting the filters replaced as quickly as possible. I thanked Townsend for his time and told him to reach out to the Department if they needed any assistance with anything.

No violations noted during the inspection

--------	-----------------------	------------------	------------------------------------	-------------	-----------------	-----------------------	-----	------

Concern No. 54940

Concern Info The caller stated that a property next door to his location illegally burned construction waste and the smoke was irritating the lungs of a recreational vehicle park nearby where people live. The caller alleged that the owners of the property transported in loads of a demolished house and lit the fire late last night. The fire department was contacted and they acknowledged the fire and that they responded to this fire around 5:00 hours on 9/20/2023. The fire department stated that the call came in as a field fire but they discovered that it was indeed a pile of what appeared to be brush and possibly construction waste. This incident is being referred to the Department's Southwest Regional Office for further investigation. Sheriff's department came out and looked at the burning debris at about 5:30 am on 9/20 and believed it to be mostly brush and notified the fire department who did not respond. Chief of Fire Department told CP that they had no legal authority to enter property.

Comments SharePoint #6699

I arrived to the original address that the concern was initially assumed to be located at 10 a.m. but it turned out to be a neighboring property to the actual address of concern. The property owners at this residence were willing to let me use their property to see the burn pile, which was not visible by public access anywhere else. We walked through the woods to the property line where a large burn pile was visible. At this distance, it was clear there was regulated waste from a building of some type with some fencing items located within the pile. I took two pictures of the pile and then drove to the address of concern to try and gain access to the property so I could identify each individual regulated item and get a better idea of how big the pile was. I called the phone number on the locked gate and reached Dylan Mountain in regard to the violations that I had witnessed earlier.

I requested someone from the facility meet with me to gain access to the property. I was told that nobody was available that day, but that the property manager could meet me the following morning to give me access. Once I returned from the office, I received a call from the CP informing me that the company had a bobcat bulldozer out at the location and that they were hauling the waste away at that time. The following morning, I met with Chad Bryan, property manager, to go take a look at the pile. When we approached the pile, it was clear that the waste had been cleared and the ground had been scraped clean of any evidence of burning. I asked Bryan what was done with the waste, and Bryan informed me that they had hauled it to the landfill. I requested that Bryan send me the receipts of them taking the waste to the landfill and Bryan said that it would be emailed that afternoon. I had Bryan sign the air pollution violation acknowledgement form and thanked him for meeting me at the site. By 3:30 the next afternoon on 9/28, I still had not received the receipts from the landfill from Bryan, so I called and left a voicemail with My Place Storage to inform them that if I did not receive the receipts, I would have to issue the company a Letter of Warning in order to get the receipts. This will remain a Letter of Warning unless the receipts are received before the report is finished.

Concern No. 54954								
Concern Info Email states that dust at the 4 state motocross facility is bad after the event on 9/17. Pictures were provided regarding the dust. The next event according to the facility's website is 10/20-22.								
Comments SharePoint #6714-I went on their website on 10/12/23 to examine the schedule, and their last event of the year will be October at a time when our office is closed. The moto complex will do well to keep their track watered down during the race, otherwise the dust will inhibit riders' visibility. I tried to give them a call to see if the October event is truly their last of the year, but they did not pick up. The dirt track is quite far from the property boundaries, so there would have to be a considerable amount of dust in order for there to be fugitive dust, at which point the spectators would probably be negatively impacted. Bailey Dietz recently inspected the track in person and did not find evidence of fugitive dust. There were no violations observed during the last investigation. No action is required.

--------	--------------------	---------------	---------------------------------	-------------	-----------------	--------------------	-----	------

Concern No. 54963

Concern Info CP stated a construction company is clearing trees and burning them to build more houses. There is constantly ash on houses in the neighborhood that they have to clean up and the smoke is very prevalent. CP stated that they do not want to go outside because the smoke is so bad. CP stated this has been going on for weeks and they are still cutting down more trees and piling them up to be burned. CP was unsure who the construction company is.

Comments SharePoint #6722

At 8:42 a.m. on 9/27/23, I arrived to the site of the concern. I parked near the entrance of the land clearing operation by the road, and I took pictures of the land construction permits that the business had posted. There was an excavator and dump truck near the northern end of the land clearing operation, so I walked over to these vehicles and waved them down. I introduced myself to Tommy Steele, a contractor (or owner) with TJS Excavating. I explained that I was visiting because of a concern related to fugitive ash, and Steele stated that he had tried his best to minimize ash from the burn piles. As we were speaking, there was a burn pile north of us, about 30 cubic yards in size, but it was at least 200 yards away from the nearest occupied structure. Steele believes the CP is angry about the land clearing operation because he had to cut down a lot of trees behind their backyard. I told Steele that he should move the burn piles further back if he ever notices ash visibly leaving the land clearing operation property boundary. I also informed Steele that I would check out all of the burn piles to check for illegally burned materials. Steele said that he would be done burning in about a week or so. I also discussed clean fill regulations and what to do with demolition waste, since he had demolished a house on property. I left Steele to check out the burn piles on the property. Besides the one actively burning, there were about 4 other piles. Some of these burn piles had fence posts and barbed wire in them, so I took pictures and headed back towards Steele to let him know about the violations. Steele readily signed the Air Pollution Violation Acknowledgment, and he explained that he dispose of the barbed wire along with the tree stumps that he could not burn. I bid farewell to Steele and I left the site at 9:39 a.m. On the morning of 9/29/23, I left a message for Steele explaining that we would write an Unsatisfactory Finding with No Response Required.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 54968								
Concern Info CP stated that Kenny Bussell, of Bussell Building is burning wood and vegetation from a construction site 7 days a week, causing thick smoke in the neighborhood. CP stated that people in the neighborhood have received sinus infections from breathing the smoke. CP believes that a fire was lit this morning using diesel fuel as an ignition source.								
Comments See Sharepoint #6728 At 8:47 a.m., I arrived on the property of the land clearing operation. Shortly thereafter, I met with Carl Dobyms, one of the construction workers with Kenny Singer Construction. I introduced myself and explained the reason for my visit. Bailey Dietz and I had been on the same site a couple of weeks ago for similar concerns. Dobyms explained that they will finish open burning in a week or two from now. I asked Dobyms whether ash has visibly flown onto the nearby neighborhoods, and he stated that they have been doing their due diligence to mitigate the fugitive emissions. Because I visited the site after heavy rains, I did not find any evidence of fugitive emissions from previous burn days. Dobyms pointed me to two of their burn piles (each one was about 40 cubic yards), and I noticed that the plumes were floating away from the neighborhoods. Dobyms thinks some of the concerns came in on Monday, when weather conditions were unfavorable. Tyler Bussell approached us roughly 10 minutes after my arrival. Bussell is the owner of the land clearing business. Bussell confirmed that the land clearing operation is almost finished. I left the property at 9:09 a.m. Later in the afternoon, I called all CPs related to this concern and explained that the land clearing operation is almost over. I requested that they call our office if the ash is visibly entering their neighborhood again and that we would try to respond as soon as possible before the rains washed away any evidence.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 54969								
Concern Info Caller states there is black smoke in the area and durable goods are being burnt on city property.								
Comments SharePoint #6732 I arrived to the city owned property to continue an investigation into a separate concern the Department had received where I found an actively burning fire. In the fire were durable goods that had been completely burnt including a box spring, an old wooden bed frame, tire wires, and an old metal door frame. I informed both Whited and Jarrett that burning these items is a violation of Missouri air regulations and that I would have to issue the city a LOW for the violation. Whited informed me that he would have one of the city staff on site stand and watch the fire until it was extinguished and that they would not add anything to the pile. Whited maintained that they did not know how the fire was lit in the first place, but that they had recently put brush in the pile to during a city wide clean up so the fire had likely reignited when the wind picked up. I had Whited sign the air pollution violation acknowledgement form and requested for Whited to send me the receipts when he disposed of the regulated waste.								
SWRO	9/29/2023	9/25/2023	Simmons Prepared Foods SWC	Southwest City McDonald	Odor	BD		
Concern No. 54965								
Concern Info ls at school, miles away, and can smell the processing plant. Rotting eggs, sewage. Smell sticks on everything, coming into school								
Comments SharePoint #6747 I arrived to the facility at 9:30 a.m. and drove around the perimeter to try and determine the direction of where the odor was traveling. As I drove down Highway 43, I was unable to detect any significant odor change from the surrounding area near the facility. There are several chicken farms around the facility and there was no indication that any odor was coming from the facility specifically, so no violations were found at this time.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 54959								
Concern Info Pete Hall emailed Bailey and I stating the odors all around Boulevard and Range Line Rd are super bad at 6:41 a.m. on 9/26. Pete said there were minimal winds but it still smelled everywhere								
Comments SharePoint #6757 At around 10:35 a.m., I arrived to the area around the sewer known to exhibit foul odors. While I could smell sewage wafting out of the sewer manhole, I did not detect excessive odor with the nasal ranger when I was standing on the RV parking lot (off city property). The City of Joplin is currently demolishing the abandoned hotel east of Pete Hall's hotel, and this may be contributing to or mitigating the smell from the sewers. I used the nasal ranger for about 10 minutes, and since I did not get any detections, I left the scene at around 10:45 a.m. Other odor concerns in the area are being investigated by the Department as well.

--------	-----------------------	------------------	------------------------------------	-------------	-----------------	-----------------------	-----	------

Concern No. 54970

Concern Info The location used to be Whispering Pines Mobile Home Park, new owners purchased the park and renamed The Anchor. The new owners have some individuals going around and removing siding from some of the trailers and then taking a bobcat and demolishing them. The resulting debris is then left onsite for an extended period of time (over a week). One of the demolished trailers was on lot #54 and some debris is blowing across onto the concerned party's lot #53 (is a tenant of the trailer park). Concerned party is concerned regarding asbestos. Trailers are believed to be from 1975 and before. CP states they are suffering health effects from the debris.

Comments SharePoint #6762

On October 12, 2023, an investigation was conducted at the location of 530 East Bland Road, Lebanon, Missouri. On arrival at the location, Jackson Winslow and I drove the access road around the mobile home park. We found several lots that contained demolished mobile homes or mobile homes that had already been cleaned up. We attempted to contact the owner and property manager but were unsuccessful and left a business card at the office door asking for a callback. I also left a message for the owner, Kelly McNatt to call me back. After returning back to the office, I received a call from Kelly McNatt, Owner of the park. I explained to McNatt the reason for my visit and briefly discussed how the Missouri Solid Waste Laws would apply to her situation. McNatt was very responsive and understanding. I requested receipts showing the proper disposal of any waste including construction and demolition waste. McNatt sent several receipts showing the disposal of fourteen tons. Those receipts are attached to the "Concern Document Set" along with photos. McNatt stated she would send additional receipts showing disposal in the future. The waste is being disposed of through the Mid-America Roll Off and Disposal (Republic Services) located in Phillipsburg, Missouri.

Concern No. 54971

Concern Info Concerned party reported that Bayless Auto Salvage was burning a pile of vegetative and mixed waste. CP was unable to determine what was in the pile but it appeared contain scrap material.

Comments SharePoint #6766

I arrived at the site that is now vacant. All salvage material from the business has been removed and buildings are empty and locked. In the center of the salvage yard there was a pile of vegetative waste and what appeared to be some metals. Determination of what exactly was in the pile could not be made because of a locked gate at the entrance to the salvage yard. Search of property owner on Greene County GIS was not available and past owner John Bayless is now deceased.

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegation as it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 54972								
Concern Info Michelle Sparrow called saying the smells from Protein Solutions are unbearable. Sparrow was driving on 32nd St right next to Protein Solutions as she smelled it. The winds at the time were 5mph northbound. Sparrow lives on 1605 Lindsey Lane and has smelled the odors at her house before too. She has called the DNR numerous times in the past.								
Comments SharePoint #6768 I drove around the accessible perimeter of the facility at 2 p.m. and detected a very strong rancid, rotten and sulphury odor along 32nd st just north of the facility. I checked the wind conditions and found the wind to be coming out of the south and trending just slightly to the east, which eliminated the other facilities in the vicinity. I then parked in the Hope Springs parking lot to the northeast and cleared my nose for 5 minutes. I noted the temperature at 88 degrees Farenheit and the relative humidity at 48%. I then drove back by the facility on 32nd St heading west using the nasal ranger where I got my first detection at 2:06 p.m. I then went to the Walmart on the corner of 20th St and Range Line Road to clear my nose for 15+ minutes. At 2:30 p.m. I left the Walmart parking lot and drove back by the facility going east on 32nd St. I got the second detection with the nasal ranger at 2:38 p.m. and it consisted of the same sulphury, rancid and rotten odor indicating that it was sourced from Protein Solutions and not a separate facility. I attempted to stop by the facility's office at 2:45 p.m. but the office was locked and the lights were off.On 10/2, I called Protein Solutions to alert them of the violation observed the previous Friday. I was able to get in contact with Brent Pennington, who is a wastewater manager for the facility. I informed Pennington that I had detected the two odor violations the previous Friday and that I would be issuing the facility a Letter of Warning.

Concern No. 54973

Concern Info 7:57am – Marion Borntrigger (sp?) – 17762 Hwy P – must be Isonova that is stinking.
No phone number to call back. She didn't say IsoNova but being P hwy..... " - voicemail left on 9/26

Comments SharePoint #6770

After noting the wind was out of the southeast, I arrived north on Highway 39 at 6:40 a.m., turned left onto P highway, then connected to county road 2170 to reach a downwind location of the IsoNova Technologies plumes. I did not see any land application trucks on or off the property, and I did not detect smells that could have originated from Verona proper when I was south of the IsoNova facility. At 6:42 a.m., I was driving west of the intersection between P highway and county road 2170 when I began using my calibrated St. Croix nasal ranger, a tool that measures the degree to which odorous air exists. During the investigation, I verified two detections at least 15 minutes apart (6:42 a.m. and 7:05 a.m.) and within one hour of odors exceeding the 7:1 dilution threshold, confirming a violation of the regulations outlined in 10 CSR 10.6-165. The odors were akin to a burned-egg odor, which is an odor known to originate from the IsoNova Technologies facility. Initial weather conditions consisted of a 68° F temperature, 80% humidity, 0% cloud cover, and northwest bound winds at 5 mph. Weather conditions for the second detection were identical. After I recorded the two detections with the nasal ranger, I again double checked that there were no odors from other facilities or land application practices in the area. After my investigation, I stopped by the IsoNova Technologies facility to inform employees of my findings. Because Dan Bowers was not on site, I instead discussed my investigation with Dani Robinson on site. Robinson wrote down information about my findings and said she would relay the message to Dan Bowers, who is currently on leave. On 10/3/23, I was instructed to reach out to Rod Steiner, plant manager, about my investigations until Bowers returns from leave.

Concern No. 55133

Concern Info The location used to be Whispering Pines Mobile Home Park, new owners purchased the park and renamed The Anchor. The new owners have some individuals going around and removing siding from some of the trailers and then taking a bobcat and demolishing them. The resulting debris is then left onsite for an extended period of time (over a week). One of the demolished trailers was on lot #54 and some debris is blowing across onto the concerned party's lot #53 (is a tenant of the trailer park). Concerned party is concerned regarding asbestos. Trailers are believed to be from 1975 and before. CP states they are suffering health effects from the debris.

Comments SharePoint #6826

Matt Knight and I arrived at the trailer park at 8:16 a.m. and we took pictures of demolished trailers while we drove around for about 15 minutes. We met with a resident of the trailer park and she expressed some of her concerns about the demolition. We left the site at 8:36 a.m. after leaving our business cards at the manager's trailer's front door. I called Diana Watson, the manager, at the office and she had claimed that the City of Lebanon did not mention anything about asbestos testing. However, the City of Lebanon emailed Matt the same file they had emailed Diana Watson, and this report included a large section discussing asbestos testing and abatement requirements. Knight later called Kelly McNatt, the owner of the trailer park, to discuss the solid waste side of things as well as the asbestos concerns. Knight clarified with McNatt that the facility should have tested and abated for asbestos. McNatt understands the implications of the violation and will order asbestos testing from here on out. We called the CP to inform them of our findings.

Concern No. 55065

Concern Info Neighbors are hauling trash in to their property and burning it. Primarily trash, construction debris. Neighbors are tearing down old mobile homes and likely brining it to burn on their property. They stopped burning for a time after DNR was called a couple years ago. They burned it at 11pm on 9/26/2023

Caller states that the company burns approx once a week.

Comments SharePoint #6771

I conducted a site investigation and spoke with Josh Bruce, Business Owner. Bruce was advised of the concern and the Missouri Solid Waste Law and Regulations were briefly explained. Bruce stated he was in the middle of a lawsuit with the neighbor and that the concern stems from that. During the investigation, I found two piles of metal that were being staged next to the dirt pile located in the field behind the storage containers. The piles are approx. three feet by three feet each and contain only metal. I found no evidence of burning on site. Bruce stated that no trash is being brought in or burned.

No validation was found for open burning or processing waste on site.

Concern No. 55082

Concern Info I was under the impression that burning plastic was illegal, I have attached a video of the resident at 4060 white oak merriam woods burning plastic bags. Please let me know what can be done about this." - Danielle Johnson-Haworth-teamjohnson4884@gmail.com

Comments SharePoint #6769

Upon arrival, I spoke to Miranda Burrus, the property owner. I explained the reason for my visit and briefly reviewed the Missouri Solid Waste Law and Regulations that might apply to the concern. Burrus stated she burns household trash and any accumulated brush found in the yard. I told her that was acceptable and that she could not burn tires, furniture, styrofoam, plastic toys, etc. She pointed to the house behind her house and stated that was where the concern was coming from. I observed the fence line between her property and the neighbors and saw it was a very narrow space. There are no housing laws that ban the burning of household trash or brush. Four photos were taken but I only found two on my camera showing the driveway and front yard. The pile of brush found was on the east side of the house. The pile was approximately three feet by three feet.

No violation was found at the time of the investigation. The property owner admitted to burning trash bags containing trash.

Concern Info Caller says the dust is the worst they have ever seen from the facility and that they are submitting picture and videos in email to the Department.

Comments SharePoint #6805

I arrived to the facility at 11:30 a.m. and parked at the corner of Washington Ave and Billings St. Upon initial observation, it appeared the plant was not operating at the time. I approached the facility to determine if they were conducting maintenance again. As I approached the facility, they started up the plant and there were very light emissions coming from the stack. I talked with Townsend to determine their progress in getting filters changed and requested a walk through the facility as I was showing a new employee the facility. By the time we walked outside to look at the facility, the stacks were blowing heavy emissions and fugitive dust was leaving the property from the south end of the facility. I informed Townsend that this was another violation and that it would be added to the RNOV report that I was still in the process of writing.

Violation was added to RNOV which is being tracked with concern 6519

Concern No. 55067								
Concern Info Caller states really bad odors are coming from Protein Solutions								
Comments SharePoint #6804 I drove around the accessible perimeter of the facility at 2 p.m. and detected a very strong rancid, rotten and sulphury odor along 32nd st just north of the facility. I checked the wind conditions and found the wind to be coming out of the south and trending just slightly to the east, which eliminated the other facilities in the vicinity. I then went and parked in the Hope Springs parking lot to the north east and cleared my nose for 5 minutes. I noted the temperature at 88 degrees Fahrenheit and the relative humidity at 48%. I then drove back by the facility on 32nd St heading west using the nasal ranger where I got my first detection at 2:06 p.m. I then went to the Walmart on the corner of 20th St and Range Line Road to clear my nose for 15+ minutes. At 2:30 p.m. I left the walmart and drove back by the facility going east on 32nd St. I got the second detection with the nasal ranger at 2:38 p.m. and it consisted of the same sulphury, rancid and rotten odor indicating that it was sourced from Protein Solutions and not a separate facility. I attempted to stop by the facility's office at 2:45 p.m. but the office was locked and the lights were off. On 10/2, I called Protein Solutions to alert them of the violation observed the previous Friday. I was able to get in contact with Brent Pennington, who is a wastewater manager for the facility. I informed Pennington that I had detected the two odor violations the previous Friday and that I would be issuing the facility a Letter of Warning.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 55075 Concern Info CP called saying smells are unbearable from IsoNova at around 6:15-6:30 a.m. as he drove north of the facility to pick up Amish workers. Winds were out of the south at 10 mph. CP said that his son's eyes were watering, and on an unbearable scale of 1-10 the smell was a 10. Comments SharePoint #6790 After noting the wind was out of the southeast, I arrived north on Highway 39 at 6:40 a.m., turned left onto P highway, then connected to county road 2170 to reach a downwind location of the IsoNova Technologies plumes. I did not see any land application trucks on or off the property, and I did not detect smells that could have originated from Verona proper when I was south of the IsoNova facility. At 6:42 a.m., I was driving west of the intersection between P highway and county road 2170 when I began using my calibrated St. Croix nasal ranger, a tool that measures the degree to which odorous air exists. During the investigation, I verified two detections at least 15 minutes apart (6:42 a.m. and 7:05 a.m.) and within one hour of odors exceeding the 7:1 dilution threshold, confirming a violation of the regulations outlined in 10 CSR 10.6-165. The odors were akin to a burnt-egg odor, which is an odor known to originate from the IsoNova Technologies facility. Initial weather conditions consisted of a 68° F temperature, 80% humidity, 0% cloud cover, and northwest bound winds at 5 mph. Weather conditions for the second detection were identical. After I recorded the two detections with the nasal ranger, I again double checked that there were no odors from other facilities or land application practices in the area. After my investigation, I stopped by the IsoNova Technologies facility to inform employees of my findings. Because Dan Bowers was not on site, I instead discussed my investigation with Dani Robinson on site. Robinson wrote down information about my findings and said she would relay the message to Dan Bowers, who is currently on leave. On 10/3/23, I was instructed to reach out to Rod Steiner, plant manager, about my investigations until Bowers returns from leave.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
<p>Concern No. 55135</p> <p>Concern Info Complaint came through the I-70/I-270 area online odor concern form. Land application in the area, acrid, manure or animal waste, rancid or rotten Odor is very strong. We can't go outside of their home. Concerned party stated her 4 year old held her nose and started gagging immediately and she almost vomited. Concerned party stated she had planned a jog and now will not be doing that.</p>								
<p>Comments SharePoint #6811</p> <p>I arrived to the vicinity of the concern at 12:45 p.m. and detected a strong odor of sewer smells. After driving up and down 5th street in Carterville, it was aparent that the odor was coming from a large property that appeared to have an area for cattle. I stopped by the address to see if the facility was a feedlot and I discovered that it was a wastewater services facility. I requested to see the property where the owners told me that they also conduct composting services as well as land application to try and remedy an old EPA superfund lead contaminated site. I asked if the facility had land applied recently, and I was told that they had not land applied but that they were pumping their temporary storage tanks to dispose of the waste they had accumulated due to the City of Joplin being temporarily shut down for acceptance of waste. It was evident that the odor was originating from the temporary holding tanks, so I explained the nasal ranger process to the owners. I then went off property and drove up and down 5th street again, but I was unable to get an odor detection.</p>								
SWRO	10/2/2023	9/29/2023	Denali Water Solutions	Newton	Odor	JW		
<p>Concern No. 55136</p> <p>Concern Info Concerned party stated the odor from the Evans Basin operated by Denali Water Solutions is extremely bad today, hot and humid. He stated it was an 8 out of 10 on the odor. Odor coming from the basin and not land application due to the wind direction.</p>								
<p>Comments SharePoint #6819</p> <p>I arrived to the Denali basin south of Fairview at 12:30 p.m. and I did not smell excessive odor with the nasal ranger. There were also tractors carrying land app fertilizer driving by, so any excessive odors would have been agriculturally exempt. I left after 15 minutes of driving around the basin area. I did not observe any violations during this investigation. No action is required.</p>

SWRO	10/11/2023	10/2/2023	Blevins Asphalt	Brookline Greene	Particulates	JW		

Concern No. 55134

Concern Info Sunday night, Oct 1, trucks were going into Blevins Asphalt from 7 PM to at least 10:15 PM. Smoke (particulates) was coming from the processing structure. There was a haze along James River Freeway.

Comments SharePoint #6827

I arrived at Blevin's at 1:12 p.m. and went to the control tower. I met with an employee inside who readily showed me the watering log. I also discussed the concern that prompted my investigation, which was the alleged smoke that had wafted out of the "processing structure." The employee told me that the batch tower occasionally emits 300 degree steam, but there is never dust and smoke, otherwise the tower is broken and the facility will lose money. I have suspected myself that the batch tower steam at times has a brown colored tinge to it, but the employee assured me that it is just steam. During my investigation, the batch tower was not emitting any particulate matter even as it was operating. There was no fugitive dust at the facility, and the water logs checked out. I reminded the employee that I might formally inspect the facility in the next couple of weeks with Rick Rebeckum. I thanked him for his time and left the facility at 1:29 p.m.

<p>Concern No. 55138</p> <p>Concern Info Fugitive dust from American Tripoli is bad this morning, caller states that the mayor may get in contact with the Department in regards to the ongoing issue.</p> <p>Comments SharePoint #6831 On the day of the investigation, an unplanned hazardous waste inspection was also being conducted at the facility. We arrived to the site at 11:15 a.m. and as we were heading west towards the facility on Oneida St I could already see fugitive emissions leaving the property from several blocks away. The winds were coming out of the north and headed south at roughly 5-7 mph which was spreading fugitive emissions for several blocks. We conducted the hazardous waste inspection of the facility from 11:30-12:45 p.m. After the inspection, I informed Joshua Townsend that I was also there for air concerns that the Department had received and that they were again in violation of 10 CSR 10-6.170 Restriction of Particulate Matter to Ambient Air Beyond the Premises of Origin. I told Townsend that it would likely be added to the already existing RNOV but that I was not sure and that I would be in touch.</p>								
SWRO	10/3/2023	10/2/2023	IsoNova Technologies	Lawrence	Odor	JW		

Concern Info CP states smells from IsoNova are really bad at around 4:45 p.m. on 10/02/23. Winds were out of the south.

I arrived at the IsoNova Technologies region at 10 a.m. and drove around for about 15 minutes. When I drove downwind, I did smell foul odor but I did not detect excessive odor with the nasal ranger. At the time, the wind was mostly northeast bound and it was difficult to drive closer downwind to the facility since IsoNova owns much property west of their facility. I left the scene at 10:15 a.m. and I later contacted Steiner, temporary contact since Dan Bowers is on leave, about the investigation.

Concern No. 55200

Concern Info Caller reports a huge fire at the end of their culdesac on the property to the west of the culdesac that is making the air hard to breathe. Caller states that the responsible party is burning treated lumber.

Comments SharePoint #6908

Due to the concern being a multi-media issue, both water pollution and hazardous waste accompanied me on this concern investigation. We arrived to the property of concern at 1 p.m. where we met with Kyle Hackworth who identified himself as the operations manager. I informed Hackworth the reason for my visit was to investigate the concern regarding open burning of potentially treated lumber and I asked to see their burn pile. Hackworth brought me to the burn pile that had been completely extinguished by the time we arrived. Hackworth informed me that they do not have any treated lumber and that they only treat the furniture once it is finished with manufacturing. All of the lumber observed in the burn pile was equivalent to vegetative waste including some stumps and logs. Hackworth also mentioned that they were in the process of building a berm to keep any noise or smoke from wafting into the adjacent neighborhood. I asked Hackworth in order to keep the peace if they could push their burn pile to the furthest end of their lot in order to keep any potential fugitive emissions away from others if they were to burn in the future. No violations were noted during the investigation.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 55269								
Concern Info Complainant is reporting odors from the rendering plant located north of their location approximately 1.2 mile. The smell is consistent with dog food. Wind is blowing south from the plant.								
Comments SharePoint #6914 Before conducting the investigation, I checked the wind conditions for the Joplin area. I found that the winds were blowing from east to west at roughly 8 mph. When I arrived to Joplin, I took the Range Line Rd exit and then took Hammons Blvd towards Protein Solutions. In the area of Joplin RV, I began to detect a slight odor that was similar to the odor found previously at Protein Solutions. The odor was not strong at this location, however. I continued on Hammons Blvd towards 32nd St and turned right towards the facility. I began to detect a slightly stronger odor at this point, and again just due north of the facility on the western end of the property. I turned around and began sampling with the nasal ranger, but did not get any detections after passing by the facility twice on each side of the road. No violations were noted during the investigation.								
SWRO	10/6/2023	10/6/2023	IsoNova Technologies	Verona Lawrence	Odor	JW		
Concern No. 55260								
Concern Info Odor issues from IsoNova dogfood plant. Caller is half a mile north of plant								
Comments SharePoint #6927 I drove around the IsoNova Technologies facility region near Verona from 10:28 a.m. to 10:41 a.m. I travelled northwest of the facility because the facility plumes were headed northwest during this time. I did not smell excessive odor when I drove downwind of the plume direction. I left a voicemail for Willard Bontrigger, CP, and for Rod Steiner, IsoNova employee, to inform them of my findings. It is unclear when Bontrigger smelled the odors, but he presumably called at 8:30 a.m. on 10/6/23 because he smelled odor early in the morning.

Concern: Calling to complain about the constant grinding noise at the Hartman Dog Food Factory. First it was the smell, now it is the grinding that has been going on for days – can't even open my window or sleep at night – obnoxious and loud. Called several times and no one has returned my call. Please call.

I drove around the area on 26th St until I was able to detect a light odor of dogfood that was coming from the factory. The winds were coming from the south-southwest at about 15mph. I circled around the block to clear my nose, and then I began sampling with the nasal ranger from 1:10-1:15 but did not detect any odor at this time.

No violations were detected during the investigation.

SWRO	10/12/2023	10/10/2023	Denali	Newton	Odor	JW		

Concern No. 55266

Concern Info Via voicemail: "Live between Stella and Wheaton. Denali is stinking it up again. I am tired of this every night – smelling this with the north wind. We may have to get a lawsuit against them or something. I thought I would let Jackson know.

Comments SharePoint #6946

I arrived at the basin area yesterday at 12:42 p.m. and I began my investigation by driving north of the basin. As there were winds out of the south, I used the nasal ranger to detect odor wafting out of the basin at 12:45 p.m. Weather was 64 degrees, 30% cloud cover, 72% humidity, and 20 mph winds. While I was waiting for the 15 minute minimum to elapse, I drove to the basin itself and spoke with 2 Denali employees about their progress on the odor system. They stated that many of the parts had shipped to the basin and they were going to begin construction on 10/13/23. They also mentioned that there was land application nearby the basin, so that nullified my investigation. I did not get a second detection when I traveled north of the basin and used my nasal ranger there for 5 minutes. I left the area 1:12 p.m.

SWRO	10/12/2023	10/10/2023	IsoNova Technologies	Lawrence	Odor	JW		
------	------------	------------	----------------------	----------	------	----	--	--

Concern No. 55270

Concern Info CP called and stated that smells from IsoNova plant were really bad early in the morning as of 10/10/23. Winds were out of the east at 2 mph.

Comments SharePoint #6967-I arrived at the IsoNova Technologies region at 11:45 a.m. and I drove around for about 15 minutes. The winds were out of the south at 20 mph, and I did not detect any excessive odor when I was north and northwest of the facility. I drove by the facility afterwards and I did not observe smoke or steam wafting out of the stacks, which may explain why the odor was minimal. I left the area at 11:58 a.m. I did not observe any violations during this investigation. No action is required.

SWRO	10/18/2023	10/11/2023	Unknown	Newton	Odor	BD		

Concern No. 55272

Concern InfoExtremely strong acrid odor. Causing nausea. Problem first occurred last month and returned recently.

Comments SharePoint #6969

I first called the CP to get more information regarding the odor. I was able to determine over a phone conversation that the odor was not likely from a facility, as there are no facilities in the area, but a lot of farm land. I informed the CP that the odor likely came from land application, and by the description of the odor, it was likely the Denali land application. I informed the CP that land application is not regulated by the Department but that I would drive around to see if I could find anything. Around 2:30 p.m. I drove around the general area of the CP's address. On Carver Rd, I was able to detect a very light odor that was similar to the Denali land application odor, but I did not smell anything else in the area that indicated it was originating from an identifiable source. No violations detected during the investigation.

--------	-----------------------	------------------	------------------------------------	-------------	-----------------	-----------------------	-----	------

Concern No. 55273

Concern Info Strong odors from Protein Solutions on October 10, 2023 at 11:32.

Comments SharePoint #6970

When I arrived to the area, I checked the weather conditions before sampling with the nasal ranger. The winds were varied, coming from the southwest/west at about 15mph. The humidity was 40% and temperature was 74 degrees Fahrenheit. I began sampling with the nasal ranger at the corner of 32nd St and Hammons Blvd, heading east down 32nd St. I did not detect any odors until I was almost past the facility to the east on 32nd St where I got my first detection at 1:24 p.m. I then took Duquesne Rd to the Walmart on the corner of 20th St and Range Line Rd to clear my nose. I returned to the area at 1:55 and began sampling at the corner of Duquesne Rd and 32nd St while heading west. I did not get a detection at this point, so I circled back around to make one more pass by the facility. I turned around and started heading east down 32nd St where I got my second detection at 1:57 just east of the location of my first detection. I then turned around and made my way to the facility where I met with Brent Pennington and Tim Lloyd to inform them of the odor violation. I informed Pennington and Lloyd that since they were still in the time frame of waiting on their first response to the last LOW written, that we would not escalate the violation and an additional response would not be required along with the response to the first LOW. I informed both Pennington and Lloyd that they would receive an additional LOW with an identical response date as the first LOW, in order for them to submit their response in a timely manner. Pennington informed me that they were still working on getting their lift station repaired (which was the main contributor to the odor) but that they were making efforts to get the issue resolved. I asked both Pennington and Lloyd if they had any questions and then thanked them for their time.
LOW will be issued with the same response date as the first LOW written on 10/5. Response for the original LOW is listed as Nov 6, 2023.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 55274								
Concern Info Strong odors reportedly from the Turkey Creek Wastewater plant. Says the odors are especially bad on evenings and weekends when the plant is locked up or closed.								
Comments SharePoint #6971								
SWRO	10/17/2023	10/11/2023	Hardwood Ridge Pellet Company	Bolivar Polk	Particulates	JW		
Concern No. 55276								
Concern Info Hardwood Ridge Pellet Company is creating dust. Site had previously installed filtration after previous concern. Had been better but recently has gotten.								
Comments SharePoint #6972 I arrived at the facility at 12:39 p.m. and conducted cursory observations of the perimeter of the facility. I then met with Charles Huft, the owner/operator/manager for the facility. I informed Huft of the reason for my visit, and he stated that he had interacted with the DNR before. Hardwood Ridge Pellet Company installed two cyclones and a baghouse a couple of years ago in response to this interaction, which was prompted by a dust concern. Huft and his employees clean up the piled sawdust twice a week, and their baghouse has a shakedown system that initiates every 2 hours. I did not observe any particulate matter exiting the property boundaries, and Huft proactively asked if there was anything he needed to do to prevent future concerns. I informed Huft that his facility was in compliance during our investigation. I also told Huft that we may visit the facility again in the future if there are more concerns, but Huft suggested that the concern is likely from one of the disgruntled neighbors that wants to receive free pellets. I thanked Huft for his time and left the facility at 12:56 p.m.

Comments	SharePoint #7015-I arrived to the IsoNova Technologies region at noon and I drove around the area for 15 minutes. There were not many winds, but I did observe a plume leaving the facility's stacks. I did not detect excessive odorous matter with my nasal ranger, so I left the region and later notified the responsible official that I had conducted an investigation there. I did not observe any violations during this investigation. No action is required.
